

# Contents

<b>1</b>	<b>Triangle, tetrahedron, triangulation, mesh</b>	<b>5</b>
1.1	Introduction . . . . .	5
1.2	About the triangle . . . . .	5
1.3	About the tetrahedron . . . . .	9
1.4	Simplex . . . . .	12
1.5	Triangulation . . . . .	13
1.6	Mesh . . . . .	20
1.7	Useful element sets . . . . .	23
1.7.1	Element sets . . . . .	23
1.7.2	About the construction of such sets . . . . .	25
1.7.3	About the construction of the edges of a triangulation	30
1.7.4	About the construction of the faces of a triangulation	31
1.7.5	About set membership . . . . .	32
1.8	Notes . . . . .	32
<b>2</b>	<b>Delaunay triangulation</b>	<b>33</b>
2.1	Introduction . . . . .	33
2.2	From Dirichlet to Delaunay . . . . .	34
2.3	Delaunay lemma . . . . .	38
2.4	Incremental method . . . . .	40
2.5	Other methods . . . . .	46
2.5.1	Method by edge swapping in two dimensions . . . . .	46
2.5.2	Divide and conquer . . . . .	47
2.5.3	Sweeping algorithm . . . . .	48
2.6	Computational aspects . . . . .	50
2.6.1	Robustness and complexity . . . . .	50
2.6.2	Reduced incremental method scheme . . . . .	51
2.6.3	Cavity correction . . . . .	52
2.6.4	Using the kernel . . . . .	57

2.6.5	Access to the base . . . . .	57
2.6.6	Inheritance . . . . .	57
2.6.7	Computational background . . . . .	61
2.6.8	Dynamic management of the background . . . . .	62
2.7	About some results . . . . .	62
2.8	Applications . . . . .	68
2.9	Notes . . . . .	70
<b>3</b>	<b>Constrained triangulation</b>	<b>73</b>
3.1	Introduction . . . . .	73
3.2	Constraints and triangulation . . . . .	74
3.2.1	Some definitions . . . . .	74
3.2.2	Constrained triangulation problems . . . . .	76
3.3	The two-dimensional case . . . . .	76
3.3.1	Construction of a Delaunay admissible constraint . . . . .	76
3.3.2	Method by constraint partitioning . . . . .	79
3.3.3	Method by enforcing the constraints . . . . .	80
3.4	Constrained Delaunay triangulation . . . . .	85
3.5	The three-dimensional case . . . . .	86
3.5.1	Construction of a Delaunay admissible constraint . . . . .	86
3.5.2	Method by constraint partitioning . . . . .	87
3.5.3	Method by enforcing the constraints . . . . .	89
3.6	Higher dimensions . . . . .	99
3.6.1	Constraint partitioning method . . . . .	99
3.7	Computational aspects in three dimensions . . . . .	102
3.7.1	Searching the missing constraints . . . . .	102
3.7.2	Local configurations . . . . .	103
3.7.3	Tentative scheme for an algorithm . . . . .	103
3.8	Some application examples . . . . .	104
3.9	Applications . . . . .	110
3.10	Notes . . . . .	111
<b>4</b>	<b>Anisotropic triangulation</b>	<b>113</b>
4.1	Introduction . . . . .	113
4.2	Notion of a metric . . . . .	114
4.2.1	Metrics and distances . . . . .	115
4.2.2	Multiple metrics . . . . .	116
4.3	Incremental method . . . . .	118
4.3.1	Euclidean space . . . . .	120
4.3.2	Riemannian space . . . . .	121

4.3.3	Discrete approximations in two dimensions. . . . .	123
4.3.4	Discrete approximations in three dimensions. . . . .	125
4.4	Computational aspects . . . . .	128
4.5	Some results . . . . .	129
4.6	Applications . . . . .	129
4.7	Notes . . . . .	130
<b>5</b>	<b>Meshing in two dimensions</b>	<b>131</b>
5.1	Introduction . . . . .	131
5.2	The empty mesh construction . . . . .	132
5.3	Field points (creation) . . . . .	136
5.3.1	Several methods for field point creation . . . . .	136
5.4	Control space . . . . .	138
5.5	Creation along the edges, classical case . . . . .	140
5.6	Creation along the edges, isotropic case . . . . .	143
5.7	Creation along the edges, anisotropic case . . . . .	147
5.8	Advancing-front type creation . . . . .	149
5.9	Field points (insertion) . . . . .	151
5.10	Optimization . . . . .	151
5.11	General scheme for the mesh generator . . . . .	152
5.12	Some results . . . . .	153
5.13	Notes . . . . .	157
<b>6</b>	<b>Parametric surface meshing</b>	<b>161</b>
6.1	Introduction . . . . .	161
6.2	The fundamental forms and related metrics . . . . .	163
6.2.1	Metric of the tangent plane . . . . .	164
6.2.2	Metric related to the main curvatures . . . . .	166
6.2.3	Physically-based metric . . . . .	172
6.3	Surface meshing . . . . .	173
6.3.1	General scheme . . . . .	173
6.3.2	Construction of a metric in $\Omega$ . . . . .	173
6.3.3	Classification of the useful metrics . . . . .	174
6.3.4	Boundary meshing . . . . .	175
6.3.5	Domain meshing . . . . .	176
6.3.6	Surface mapping . . . . .	176
6.4	Some results . . . . .	176
6.5	Applications . . . . .	187
6.5.1	Cylindrical meshing . . . . .	187
6.5.2	Sampled surface meshing . . . . .	190

6.5.3	Arbitrary surface meshing . . . . .	190
6.5.4	Adaptive meshing . . . . .	192
6.6	Notes . . . . .	192
<b>7</b>	<b>Meshing in three dimensions</b>	<b>195</b>
7.1	Introduction . . . . .	195
7.2	The empty mesh construction . . . . .	196
7.3	Field points (creation) . . . . .	199
7.3.1	Several methods for field points creation . . . . .	199
7.4	Control space . . . . .	201
7.5	Creation along the edges, classical case . . . . .	201
7.6	Creation along the edges, isotropic case . . . . .	203
7.7	Creation along the edges, anisotropic case . . . . .	203
7.8	Advancing-front type creation . . . . .	204
7.9	Field points (insertion) . . . . .	206
7.10	Specified internal edges and faces . . . . .	207
7.11	Optimization . . . . .	207
7.12	General scheme of the mesh generator . . . . .	208
7.13	About some results . . . . .	209
7.14	Notes . . . . .	214
<b>8</b>	<b>Optimizations</b>	<b>215</b>
8.1	Introduction . . . . .	215
8.2	Mesh quality . . . . .	215
8.2.1	Shape and size qualities . . . . .	216
8.2.2	Classification . . . . .	220
8.2.3	Other (isotropic) quality measures . . . . .	221
8.3	Topological operators . . . . .	222
8.3.1	Edge swapping in two dimensions . . . . .	223
8.3.2	Ball remeshing in two dimensions . . . . .	223
8.3.3	Shell transformation in three dimensions . . . . .	223
8.3.4	Entity suppression by local remeshing . . . . .	227
8.3.5	Suppression by means of reduction . . . . .	227
8.3.6	Edge splitting . . . . .	229
8.3.7	Valance relaxation . . . . .	229
8.4	Geometric operators . . . . .	230
8.4.1	Local geometric operator . . . . .	230
8.4.2	Global geometric operators . . . . .	234
8.5	Remarks on surface optimization . . . . .	234
8.6	Algorithmic aspects . . . . .	235

8.6.1	How to use an optimization operator . . . . .	236
8.6.2	How to control an optimization operator . . . . .	236
8.6.3	How to control an optimization process . . . . .	237
8.7	Some results . . . . .	238
8.8	Applications . . . . .	242
8.9	Notes . . . . .	242
<b>9</b>	<b>Mesh adaptation</b>	<b>243</b>
9.1	Introduction . . . . .	243
9.2	Mesh adaptivity methods . . . . .	244
9.2.1	The $r$ -method . . . . .	244
9.2.2	The $h$ -method . . . . .	245
9.2.3	The $p$ -method . . . . .	245
9.2.4	The $hp$ -method . . . . .	247
9.3	Modification versus reconstruction . . . . .	247
9.3.1	Adaptivity based on local modifications . . . . .	248
9.3.2	Adaptivity based on a complete reconstruction . . . . .	250
9.4	General scheme for an adaptation loop . . . . .	251
9.5	Control space . . . . .	252
9.5.1	Definition of the successive control spaces . . . . .	252
9.5.2	Control space construction . . . . .	253
9.6	Boundary meshing (or remeshing) . . . . .	255
9.6.1	Curve meshing (or remeshing) . . . . .	256
9.6.2	Surface meshing (or remeshing) . . . . .	256
9.7	Domain meshing . . . . .	256
9.8	Solution interpolation . . . . .	259
9.9	General scheme of an adaptive loop . . . . .	264
9.10	Some results . . . . .	265
9.10.1	An isotropic example . . . . .	266
9.10.2	An anisotropic example . . . . .	274
9.11	Notes . . . . .	280
<b>10</b>	<b>Data structures</b>	<b>281</b>
10.1	Introduction . . . . .	281
10.2	Useful information (tentative list) . . . . .	282
10.2.1	Recalling the notion of a mesh . . . . .	282
10.2.2	For a (static) problem using a $P^1$ approximation . . . . .	282
10.2.3	For a (static) problem using a $P^2$ approximation . . . . .	287
10.2.4	For an adaptive computational process . . . . .	290
10.2.5	Constraining a mesh . . . . .	291

10.3	A general data structure . . . . .	292
10.3.1	A general data structure . . . . .	292
10.4	A geometric data structure . . . . .	300
10.4.1	The two-dimensional case . . . . .	300
10.4.2	A few remarks about three dimensions . . . . .	303
10.5	Geometric representation . . . . .	306
10.5.1	The two-dimensional case . . . . .	306
10.5.2	The three-dimensional case . . . . .	308
10.6	Mesh data structure . . . . .	315
10.6.1	The two-dimensional case . . . . .	315
10.6.2	The three-dimensional case . . . . .	317
10.7	Notes . . . . .	319
<b>11</b>	<b>Boundary meshing</b>	<b>321</b>
11.1	Introduction . . . . .	321
11.2	Boundary meshing in two dimensions . . . . .	321
11.2.1	CAD definition of a boundary . . . . .	322
11.2.2	Related (discrete) data base . . . . .	322
11.2.3	Construction of a polygonal discrete line . . . . .	322
11.2.4	Meshing . . . . .	323
11.3	Boundary meshing in three dimensions . . . . .	331
11.3.1	Curve meshing . . . . .	332
11.3.2	Meshing of a surface consisting of several patches . . . . .	332
11.3.3	Surface remeshing using optimization . . . . .	339
11.4	Results . . . . .	340
11.4.1	Planar curve mesh . . . . .	340
11.4.2	Mesh of a surface defined by several patches . . . . .	343
11.4.3	Surface mesh (remeshing via optimization) . . . . .	345
11.5	Notes . . . . .	346
<b>12</b>	<b>Finite element applications</b>	<b>349</b>
12.1	Introduction . . . . .	349
12.2	Metric definition and metric construction . . . . .	349
12.2.1	Hessian computation . . . . .	352
12.2.2	Remark about the metric computation . . . . .	353
12.2.3	Metric associated with the usual norms . . . . .	353
12.2.4	Relative error metric . . . . .	354
12.2.5	Intersection of several metrics . . . . .	354
12.2.6	Transfer of the solution from one mesh to the other . . . . .	355
12.3	Three CFD examples . . . . .	356

12.3.1	General presentation . . . . .	356
12.3.2	Supersonic scramjet . . . . .	358
12.3.3	Viscous transonic flow for a Naca-0012 . . . . .	361
12.3.4	Viscous supersonic flow around a cylinder . . . . .	364
12.4	Notes . . . . .	369
<b>13</b>	<b>Other applications</b>	<b>371</b>
13.1	Introduction . . . . .	371
13.2	Medial axis and medial surface . . . . .	371
13.2.1	Medial axis . . . . .	371
13.2.2	Medial surface . . . . .	372
13.2.3	Several applications based on the skeleton . . . . .	373
13.3	Parallel computing . . . . .	374
13.3.1	A posteriori partitioning . . . . .	374
13.3.2	A priori partitioning . . . . .	375
13.3.3	Partitioning by inductive Delaunay triangulation . . . . .	375
13.3.4	Partitioning a set of points by induction from the De- launay triangulation of the convex hull. . . . .	377
13.3.5	Partitioning from the domain boundary . . . . .	378
13.4	Minimal roughness of a surface . . . . .	384
13.5	Notes . . . . .	385
